

ATHLETIC FIELD PROGRAM

WARM SEASON

Foliar nutrient program with L-amino acids maximizes uptake of nutrients resulting in healthier turf, rapid green up, and long-term color response.

FOLIAR PROGRAM

Apply every 14 to 28 days

18-3-4 ZetaPlex N Balanced nutrient package with 18 L-amino acids. Ultimate nutrient absorption provides excellent plant response with low dose applications. Perfect foliar fertilizer analysis for warm season athletic field turf.

Rate:
3 to 6 oz
per 1000

Talon Micros Pak Improves lateral growth of stolons, rhizomes and enhances foliar recovery. Talon improves cell division, nutrient use, photosynthetic properties and helps turf maintain healthy green color.

Rate:
1 to 3 oz
per 1000

1-0-15 ZetaPlex K Unsurpassed foliar availability of potassium for proper plant water relations and cell turgor pressure. L-amino acid package allows plant to respond optimally during summer heat, drought, and traffic pressures.

Rate:
3 to 6 oz
per 1000

Nautico Verde Concentrated cold processed seaweed extract supplies multiple carbon sources for better root development, improved photosynthesis and increased plant antioxidant production.

Rate:
1.5 to 3 oz
per 1000

SOIL PROGRAM

Apply once a month

Nano Cal Carbon encapsulation of calcium ensures rapid delivery to roots. Calcium helps reduce sodium build up in soils.

Rate:
1.5 to 3 oz
per 1000

Soil Support Natural biological extracts stimulate growth of beneficial microbes. Improves soil life, increases mineralization of soil nutrients and utilization of fertilizers.

Rate:
3 oz
per 1000
