

RECOVERY AND RELIEF

WARM SEASON

High Performance Bionutrition for Problem Turf

When heat, drought, traffic, and other stress conditions are more than your turf can handle, depend on the reliability, performance, and protection of EnP Turf.

Enhanced Antioxidants

Root and Shoot Recovery

Improved Stress Tolerance

Carbohydrate Production

ZetaPlex Complete 3-0-0 Contains 18 essential L-amino acids, improves plant metabolism, and helps build proteins for recovery of leaf, stem, and root tissues. Plants need extra help building proteins for plant structures during recovery.

Rate:
1 to 3 oz
per 1000

Nautico Verde Concentrated seaweed extract helps to initiate root and shoot formation, increases cell development, improves carbohydrate production and boosts the natural plant defense systems.

Rate:
1.5 to 3 oz
per 1000

Talon Micros Pak Provides important micronutrients and natural plant extracts. Talon Micros Pak will improve plant respiration, photosynthesis and lateral recovery. Contains Ca, Fe, Mg, Mn, Zn, Cu and B.

Rate:
1 to 3 oz
per 1000

ProVita Provides plant extracts geared to improve antioxidant activity important for recovery of leaf and root tissue. ProVita will help drive root recovery after loss or disruption. Surfactant improves crown and root hydration.

Rate:
3 to 6 oz
per 1000

High Drive Drives density and lateral growth. A bionutritional package specifically designed to strengthen turf, improve respiration, and allow for better regeneration of leaf stem and root biomass. Use higher rates for damage recovery.

Rate:
1 to 3 oz
per 1000
