

# AERATION RECOVERY

Return your turf to normal *lighting fast!*

Treat your aerated turf with a complete foliar program including natural plant extracts and active L-amino acids. Give your turf the necessary advantage for rapid recovery.

*Your greens and golfers will thank you.*

## EnP Aeration Recovery Program

Apply to greens and tees 3 days prior to aeration and 7 days after aeration

<b>Zeta <math>\times</math> Plex<sup>®</sup> 18-3-4</b>	3 - 6 oz per 1,000 sq ft
<b>ProVita</b>	3 oz per 1,000 sq ft
<b>Talon</b>	1.5 oz per 1,000 sq ft
<b>Zeta <math>\times</math> Plex<sup>®</sup> Grow 40</b>	1 oz per 1,000 sq ft

## Why Are Lower Nitrogen Rates Important?

Applying high rates of nitrogen can lead to poor turf quality and higher disease incidence. Our nutrient package provides quicker lateral recovery while using lower rates of nitrogen. This program results in less top growth, better green speeds and smoother surfaces during recovery process.

High rates of nitrogen can have a negative impact on rooting, but with the EnP Aeration Program, the plant burns fewer carbohydrates, yielding a positive root growth response. Less nitrogen also means lower disease pressure and healthier turf more able to withstand disease and other environmental pressures.

A program  
proven to  
enhance turf  
recovery  
with lower  
nitrogen rates.

# AERATION RECOVERY

## A PROVEN PROGRAM

Penn State University researcher, Mike Fidanza, demonstrated the efficacy of the EnP Aeration Recovery Program. This program results in more rapid closure of core cultivation holes, improved turf recovery and higher quality turf. With the use of this program, nitrogen applications for the purpose of aeration recovery can be considerably reduced or quite possibly eliminated.

### *Product*

### *Benefits*

#### **Zeta<sub>4</sub>Plex<sup>®</sup> 18-3-4**

Balanced macro-nutrient fertilizer to supplement plant metabolic activity. Provides nutrients for consistent color and proper tissue development.

#### **ProVita**

Provides nutrients and plant extracts geared to improve antioxidant activity important for recovery of leaf and root tissue. ProVita will help increase root growth after disruption from core cultivation.

#### **Talon**

Improves lateral growth of stolons, rhizomes and enhances foliar recovery. Talon improves cell division, nutrient use, photosynthetic properties and helps turf maintain healthy green color.

#### **Zeta<sub>4</sub>Plex<sup>®</sup> Grow 40**

Patented amino acid technology drives protein and enzyme production. This improves plant energy aspects for more rapid turf recovery.
