

# FALL ULTRADWARF PROGRAM

Bionutrient program to maximize rooting and carbohydrate production in Bermudagrass.

## WEEKLY FOLIAR SPRAY

**Energy** Blend of Fe, Mn and Zn in an organic acid chelate formulated with sugars that hold nutrients in solution. Increases chlorophyll production and provides sugars to plant and microbes. Brilliant and long lasting color for your turf. **Rate:** 3 oz per 1,000

**Nautico Verde** Concentrated cold processed seaweed extract supplies multiple carbon sources for better root development, improved photosynthesis and increased plant antioxidant production. **Rate:** 3 oz per 1,000

**ZetaPlex Potassium** Unsurpassed foliar availability of potassium for proper plant water relations and cell turgor pressure. Allows plant to respond optimally during salt stress, drought, and traffic pressures. **Rate:** 3 oz per 1,000

**ZetaPlex Grow 40** Contains amino acid specific to increasing plant energy. Allows the plant to build proteins and improve carbohydrate storage. Improves plant metabolism especially photosynthesis. Improves uptake of other nutrients and spray tank additions. **Rate:** 0.5 to 0.75 oz per 1,000

## MONTHLY SOIL SPRAY

**Nutri-Synergy Bio** A powerful combination of plant and soil enhancers designed to produce more vigorous, resilient plants that are able to defend against disease, insects, environmental stresses and heavy traffic. Nutri-Synergy improves soil nutrient availability. **Rate:** 3 to 6 oz per 1,000

**Nutri-Synergy P** Phosphorus is integral to protein synthesis and essential for cell division and new tissue development. Nutri-Synergy increases P availability and unlocks precipitated soil phosphorus tie-ups. This increases availability well beyond the P supplied in the formulation. **Rate:** 3 to 6 oz per 1,000

**Nano Cal** Stabilized liquid form of calcium carbonate for soil application. Calcium helps release sodium from the soil exchange sites for removal from the soil system. Improved base saturation levels lead to better overall soil environment. **Rate:** 3 to 6 oz per 1,000

**Command** Reduces soil surface tension allowing water and nutrients to penetrate organic and hydrophobic layers. Organic acid component breaks down bicarbonate complexes leading to better porosity, oxygen movement and root absorption of nutrients. **Rate:** 16 to 32 oz per Acre

**OPTIONAL: ZetaPlex Grow 40** **Rate:** 0.5 to 1 oz per 1000
